

Tech Stack Justification

Technologies Used

Frontend : HTML ,CSS, JavaScript

Backend : Python

Framework : Flask

Database : SQLite

Important Library : Flask Library

Why We Chose This Tech Stack

Why Python?

Python is simple, beginner-friendly, and powerful. Since our team is in 1st year, Python helps us build logic quickly without complicated syntax.

It is also excellent for backend development and handling user data.

Why Flask?

Flask is a lightweight Python web framework that helps us create websites easily.

We chose Flask because:

- It is simple for beginners
- Easy to connect frontend and backend
- Good for login systems, quiz handling, and reward tracking

Why HTML, CSS, JavaScript?

These are the core technologies for building websites.

- HTML creates structure
- CSS improves design and appearance
- JavaScript adds interactivity

This helps us create an attractive and user-friendly learning platform.

Why SQLite?

SQLite is lightweight and easy to use for student projects.

It helps us store:

- User accounts
- XP points
- Badges
- Quiz scores
- Leaderboard rankings

This makes it perfect for our project.
